SYSTEM X™ BT8390 V2 MOUNTING RAIL

Product Update

The BT8390 horizontal mounting rail has been updated with a new profile.

A new and unique rail design makes System X stand out as a B-Tech product, compared to the cheaper imitation products that use off-the-shelf extruded rails. The new shape V2 rails work the same as the V1, but feature no insert channels on the front, giving the rail a clean look and the curved front improves the overall aesthetics. The V2 rail can be used with the same System X components* as the V1 rail and will be included as standard in System X Complete Mounting Kits (when stock arrives in each territory).

V2 rails can still be extended together using the BT8390-EXT.

Lengths available: **0.5m, 0.7m, 1m, 1.5m, 1.75m & 2m**
Available in **Black** only

*System X components BT8390-ADP & BT8390-WFK4**, collar compatible mounts (shelves etc.) and the BT7884 Flip down tray cannot be assembled onto the front of the V2 rail at this time (BT8390-SA mounting arms can be used as an alternative for shelf installations).
*Product modifications for V2 compatibility are in process and will be available at a later date.
Note: V1 rails will be available from UK by request, whilst stock lasts.
