When in TV mode the unit will detect the 1st CAT5e/6/7 output's EDID when it obtain a 4Kx2K EDID and send out the signal accordingly to other output ports. If the 1st CAT5e/6/7 output is without a 4Kx2K's EDID the unit will detect all output's EDID and send out the signal that all outputs can accept. This device obtain the last memory function therefore, the device will use the last output port 1's EDID when output port 1 is not connected to a display after power cycling or switching in between the EDID setting.

Switch to STD to use build-in EDID if the display has problem.

STD EDID's video at 1080p@60Hz and audio at LPCM 2CH.
